PSA ADHESIVE

STEARATE
LUBRICANT

DOESN'T CLOG

Applications

- For sanding jobs on sheet metal processes to even out the edge of the repair, such as the areas worked with pastes and fillers in fine finishes or on natural and soft wood.
- Surface preparation for the application of paste filler, putty filler, plastics, paints, wood, varnishes and lacquers; leaves a uniform surface.
- For sanding jobs that require smooth finishes.

Characteristics

- Anti-clogging technology with molten Zinc Stearate that helps to obtain an excellent finish.
- High-speed cutting and higher performance.
- Dry and semi-wet sanding.
- The additional layer of Zinc Stearate prevents premature clogging and extends the product's useful life.
